Education

Vellore Institute of Technology — Vellore, India
B.Tech in Information Technology; ***CGPA: 9.08*** — *2024 – 2028*

Delhi Public School — Gwalior, India
Higher Secondary Education (Class XII); ***Percentage: 89.2%*** — *2023 – 2024*

Technical Skills

Languages: JavaScript (ES6+), TypeScript, C++, SQL, HTML, CSS
Backend: Node.js, Express.js, REST APIs, JWT Authentication
Frontend: React.js, Vite, Tailwind CSS
Databases: MongoDB, PostgreSQL, Vector DB
Cloud & DevOps: AWS (EC2, S3, Lambda, DynamoDB, SNS, SQS), Git, GitHub, Vercel
AI & LLM: RAG, Embeddings, Qdrant (Vector Database), Chunking Strategies, RAG Evaluation, Prompt Engineering, Prompt Chaining, LLM APIs (Groq)
AI Agents: ReAct Agents, LangGraph, Model Context Protocol (MCP)
Testing & Tools: Jest, Vitest, Postman
Core CS: Data Structures & Algorithms, OOP, DBMS

Projects

SlideOS – AI-Powered Presentation Builder | GitHub | Live Demo — 2026

- Built a full-stack app (React, Node.js, Express, MongoDB) that turns a natural-language prompt into a designed slide deck using an LLM (Groq, JSON mode), with tunable slide count, tone, and audience; the server enforces the exact slide count and falls back to a deterministic generator if the LLM fails.
- Implemented JWT and bcrypt authentication with Google OAuth, owner-only access control on decks, and public read-only share links that never expose user IDs.
- Developed an editor with drag-and-drop reordering, undo/redo, debounced autosave, 12 themes, and PPTX/PDF export through a shared layout engine.
- Wrote 209 automated tests (78 Jest backend, 131 Vitest frontend) covering validators, controllers, services, and hooks.

MongoDB MCP Server for AI Tools | GitHub — 2026

- Built a TypeScript Model Context Protocol (MCP) server that gives AI tools structured access to MongoDB, with schema inference and collection discovery.
- Enforced a read-only security model that blocks write operations and exposes only controlled queries to AI clients.
- Used the MCP SDK and Zod to validate every request for type-safe communication between AI tools and the database.

Cloud-Based Digital Locker & Parcel Notification System | GitHub — 2026

- Built the warden dashboard on EC2 (Node.js, Express) to log parcels with photo upload, scan pickup codes, and view live parcel status from DynamoDB.
- Integrated S3 for parcel photo storage and invoked the core-logic Lambda from the dashboard in an event-driven AWS architecture (Lambda, DynamoDB, SNS, SQS, EventBridge).
- Tested the system end to end, including SNS fan-out, dead-letter queue alarms, and scheduled state auditing, and wrote the project documentation.

Certifications

IBM DevOps Certification

Achievements

Problem Solving: Solved 220+ problems on LeetCode covering arrays, strings, trees, graphs, and dynamic programming, and practiced contest problems on Codeforces.

Patent Contribution: Contributed as a frontend developer in a 3-member team on an AI-driven system for detecting risk in distributed file propagation. [published]
